Overview

Boston Gear offers seven types of couplings that permit accurate linkage of in-line system components for the transmission of motion and power. They include: three-jaw insert and three-jaw spider ring types, shear, clamping, multi-jaw, rigid, 1-piece, and plastic sleeve types. All are manufactured at our Charlotte, NC facility and are available to ship from stock when you need them.

Features and Benefits

- Boston Gear's couplings connect two shafts together to accommodate a variety of configuration needs.
- These couplings are flexible enough to tolerate up to 1/32" of lateral misalignment and 3° angular misalignment.
- Because no lubrication is required, maintenance is easier and performance smoother.

Sample Applications

- Machine tools
- Pumps and compressors
- Gear boxes
- Material handling
- Packaging equipment
